SUBCELLULAR LOCATION: Cytoplasmic (Probable).
TISSUE SPECIFICITY: Detected in heart, brain, placenta, lung, peripheral blood leukscytes, spleen, kidney, testis, prostate, pancreas and lymph node.
FTM: Autophosphorylated.
SIMILARITY: Belongs to the Ser/Thr family of protein kinases.
SIMILARITY: Contains 1 CARD domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GO; GO:0004674; F:protein serine/threonine kinase activity; TAS. "Involvement of receptor-interacting protein 2 in innate and adaptive
                                                                                                                                                         28-FEB-2003 (Rel. 41, Last sequence update)
10-OCT-2003 (Rel. 42, Last annotation update)
Receptor-interacting serine/threonine protein kinase 2 (EC 2.7.1.37)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FUNCTION: Activates pro-caspase-1 and pro-caspase-8. Potentiates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CASP-8-mediated apoptosis. Activates NP-kappaB (By similarity).
CASP-8-mediated apoptosis. Activates NP-kappaB (By similarity).
CANTATTC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
SUBMINI: Binds to CHAR/CLARP and CASPI via their CARD domains
Binds to BIRC3/c-IAPI and BIRC2/c-IAP2, TRAF1, TRAF2, TRAF5 and
TRAF6. May be a component of both the TNFRSF1A and TNFFSF5/CD40
receptor complex (By similarity).
SUBCELLULAR LOCATION: Cytoplasmic (Probable).
FTM: Autophosphorylated (By similarity).
SIMILARITY: Belongs to the Sar/Thr family of protein kinases.
SIMILARITY: Contains 1 CARD domain.
                                                                                                                                                                                                                   Mus musculus (Mouse).

Chem. 276:2551-2554 (2001).
- FUNCTION: Enhances caspase-9-mediated apoptosis. Induces NF-kappa-B activity via RICK (CARDIAK, RIP2) and IKK-gamma. Confers responsiveness to intracellular bacterial lipopolysaccharides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SUBUNIT: Self-associates. Binds to caspase-9 and RICK by CARD-CARD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            interaction.
SUBCELULAR LOCATION: Cytoplasmic.
TISSUB SPECIFICITY: Highly expressed in adult heart, skeletal TISSUB SPECIFICITY: Highly expressed in adult heart, skeletal muscle, panoreas, spleen and ovary. Also detected in placenta, lung, liver, kidney, thymus, testis, small intestine and colon. SIMILARITY: Contains I CARD domain.
SIMILARITY: Contains 1 NACHT domain.
SIMILARITY: Contains 9 leucine-rich (LRR) repeats.
                                                                                      MEDLINE=99262599; PubMed=10329646; Inohara N., Koseki T., del Peso L., Hu Y., Yee C., Chen S., Carrio l Merino J., Liu D., Ni J., Nunez G.; Modl, an Apaf-1-like activator of caspase-9 and nuclear factor-kappas."; J.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FUNCTION: APPPTOTIC SUPPRESSOR. THE BIR MOTIFS REGION INTERACTS WITH THE RECEPTOR ASSOCIATED FACTORS 1 AND 2 (TRAFI AND TRAF2) TO FORM AN HETEROMERIC COMPLEX, WHICH IS THEN RECRUITED TO THE TUMOR NECROSIS FACTOR RECEPTOR 2 (TWFR2) TO SUBUNIT: Interacts with SMAC and with PRSS25; these interactions inhibit apoptotic suppressor activity.

SUBCELLUAR LOCATION: Cytoplasmic (Potential).

TISSUE SPECIFICITY: PRESENT IN MANY FETAL AND ADULT TISSUES.

MAINLY EXPRESSED IN ADULT SKELETAL MUSCLE, THYMUS, TESTIS, OVARY, THYMUSKASS, LOW OR ABSENT IN BRAIN AND PERIPHERAL BLOOD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      STRUCTURE BY NMR OF 266-363.

-!- CATALYTIC ACTIVITY: N deoxynucleoside triphosphate = N diphosphate
  -!- SUBCELLULAR LOCATION: Nuclear (Potential).
-!- TISSUE SPECIFICITY: Ubiquitously expressed.
-!- DOMAIN: Its C-terminal part could serve as the catalytic domain during nucleotide polymerization, while its N-terminal part could provide sites for protein-protein interactions with other factors during translesion DNA synthesis.
-!- SIMILARITY: Belongs to the DNA polymerase type-B family.

                               FUNCTION: Involved in the maintenance of nuclear organization and structural integrity. Probable anchoring protein which theters the nucleus to the cytoskeleton. Connects nuclei to the cytoskeleton by interacting with the nuclear envelope and with F-actin in the cytoplasm.
SUBUNIT: Interacts with MUSK, with F-actin via its N-terminal
   prédiction.
CAUTION: Ref.7 (BAB71097) sequence differs from that shown due to
a chimeric CDNA.
   domain, and with LMNA in vitro (By similarity).
SUBCELLULAR LOCATION: Type IV membrane protein (Potential). The largest part of the protein is cytoplasmic, while its C-terminal part is associated with the nuclear envelope, most probably the outer nuclear membrane. In skeletal and smooth muscles, a
  VSP_007139, VSP_007140,
  domain, mediates the nuclear envelope targeting.
SIMILARITY: Belongs to the nesprin family.
SIMILARITY: Contains 1 actin-binding domain.
SIMILARITY: Contains 2 calponin-homology (CH) domains.
SIMILARITY: Contains 12 HAT repeats.
SIMILARITY: Contains 11 HAT repeats.
SIMILARITY: Contains 31 spectrin repeats.
SIMILARITY: Contains 31 spectrin repeats.
SOUTION: Ref. 5 (CAB55865, CAB5866, CAC16281)
sequences differ from that shown due to erroneous gene model
   DOMAIN: The Klarsicht domain, which contains a transmembrane
   CAUTION: Ref.14 sequence differs from that shown due to two frameshifts in positions 8412 and 8784.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

## ALIGNMENTS

AAZ48762 standard; cDNA; 2502 BP. Human RICK coding sequence 21-MAR-2000 (first entry) AAZ48762; 

RICK; human; RIP-like interacting CLARP kinase; apoptosis regulator; ARC; crapase-8; caspase-10; CD95 signalling; apoptosis signalling pathway; CIDE-A; CIDE-B; DREP-1; diagnosis; cell growth; apoptosis dysregulation; gene therapy; cardiac disorder; cancer; neurodegenerative disorder; AIDS; aplastic anaemia; ischaemic injury; toxin-induced liver disease; ss.

Homo sapiens

This sequence encodes the human RICK (RIP-like interacting CLARP kinase)

Co Tapoptosis, potentiating apoptosis induced by caspase-8 and caspase-10

during CD95 signalling. The invention provides methods for identifying

during CD95 signalling pathway inhibitors and activators, and methods and

compositions for screening compounds which will modulate the interactions

CC compositions identified: ARC, RICK, and the CIDE family of

activators (GIDE-A, CIDE-B and DREPL). RICK is useful in screening

catalyators (GIDE-A, CIDE-B and DREPL). RICK is useful in screening

compositions identified: ARC, so and the CIDE family of

cativators (GIDE-A, CIDE-B and DREPL). RICK is useful in screening

conflosted with excess cell growth and dysregulation of

disease associated with excess cell growth and dysregulation of

catoptosis. Complexes containing RICK and CLARP can be used in drug

screening assays to identify inhibitor molecules blocking CD95-mediated

conflostification of ARC-like inhibitory compounds may be useful for gene

thrapy treatment of disease with increased cell death in muscle tissue

conflostification of ARC-like inhibitory compounds may be useful for gene

thrapy treatment of disease with increased cell death in muscle tissue

can deadiac disorders. Therapeutic compositions of CIDEs can be used to

treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia,

can be used as resqents for the preparation or affinity chromatography

media, and for diagnostically measuring RICK levels. A specific inhibitor

conf an essential step in the biochemistry of apoptosis is needed. RICK

cinteraction with intracellular factors such as CLARP and PADD appears to

be essential for apoptosis, inhibitors of RICK binding to intracellular

cup propressis factors are potential drug candidates Compositions for identifying apoptosis signaling pathway inhibitors useful for treating diseases.   New B1 protein regulates cell death and cell survival pathways -
derivatives, DNA and antibodies, also regulate intracellular inflammation
; for treating AIDS, cancer.
   This invention describes the isolation of a novel human B1 protein which can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as AIDS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above

(MILL-) MILLENNIUM PHARM INC.

Bertin J;

WPI; 1999-494269/41. P-PSDB; AAY31140.

Novel CARD-3 and CARD-4 genes and polypeptides used or treating regulation of cellular proliferation and differentiation and cell survival.

Example 2; Fig 1; 181pp; English.

This invention describes the isolation of novel human caspase recruitment domain, CARD-3 and CARD-4 polynuclectides and proteins and a partial murine CARD-1 protein and genes. The genes and proteins of the invention are involved in the regulation of caspase activation. The caspase crecinitment domain (CARD) polynuclectides, polypeptides, homologues and recruitment domain (CARD) polynuclectides, polypeptides, homologues and antibodies can be used in squeening assays, detection assays, predictive methods may be used to diagnose and treat patients which are suffering from a disorder associated with abnormal level or rate of apportoric cell death, abnormal activity of the TMF receptor complex, abnormal activity of the TMF receptor complex, abnormal activity of the TMF receptor complex, or abnormal activity of the ray be treated fuclude cancer (particularly follicular curvity of the TMF receptor complex, or abnormal activity of the ray be treated fuclude cancer (particularly follicular compendent tumours), autoingmune disorders (e.g. systemic lupus cappendent particular springmune disorders (e.g. systemic lupus cappendent particular dystrophy, cerebellar degeneration, and stroke. CC CARD-3 protein interacts with other cellular proteins, and so can be used for survival. The CARD proteins may also be used to for screen drugs or survival. The CARD proteins may also be used to for screen drugs or compounds which modulate their activity. The CARD-4 specen drugs or compounds which modulate their activity. The CARD-4 specen drugs or cappendent the mann CARD-4 splice variants, CARD-4 and CARD-42. This sequence cappendent the human CARD-4 splice variants, CARD-41 in the method of the invention

   Clone CTA-437115 is from a release of the human BAC library CTTB-HS-A. The library contains cloned DNA from human sperm. See: Shizuya et al., proc. Natl. Acad. Sci. USA 89:8794-7 (1992); U-J. Kim et al., Genomics 34:213-8 (1996). The clone is available from Research Genetics, Inc. (http://www.resgen.com).
  NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
   This sequence was finished as follows unless otherwise noted: all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
   NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is CTA-237G1. The actual start of
this clone is at base position 1 of CTA-437L15; actual end is at
116650 of CTA-437L15.
   This chromosome 8 clone was provided by Dr. Patrick Concannon (patcon@vmmc.org) at the Virginia Mason Research Institute.
   note="CpG island (%GC=69.1, o/e=0.80, #CpGs=93)"
   This clone contains STS HS275YF1 (NID:g1051703).
